

Ian Cox nk80937 -

I came up with the code by writing down things I needed to do to have my code work. I started by reading the file and then looping through the whole thing, and while I loop you just add each integer to a set total. Then I wrote the code to write out the total.

Here is the output:

```
[icox1@linux4 Labs]$ ./project2  
Sum: 4679
```

Here is a change, I made one of the integers 102 instead of 100. Here is the output:

```
[icox1@linux4 Labs]$ ./project2  
Sum: 4681
```
